Alexander Carden ARTS486 Project 1: As We May Rethink Functional Specification January 31, 2020

Scope

Create a design for the memex that is able to scan, share, store, and download documents as well as other people's trails on said documents.

Solution Overview

I want to create a memex basically built inside a desk so that it would fit naturally in a room and not look too out of place. All of the computer parts would be housed inside the desk and accessible by removing panels underneath the desk.

Requirement Specifications

The memex comes with a built in monitor to view your documents, a scanner to upload the documents onto the computer, a small printer on the other side, and data storage units to maximize the amount of data you can hold.

Use Cases

Download a document

Turn on the memex
Click the globe icon
Search in search bar what kind of document you are looking for
Click the desired document from the results
Look through the document to make sure it's what you want
Click the download button on the top left of the screen
Click the home button in the sidebar
Click the downloads tab in the sidebar
Access your result

Adding a document to your memex

Turn on the memex
Click the scan icon in the upper right
Answer the prompt
Pepare the pages you would like to scan
Lay the page on the memex's scanner
Flip pages when prompted
Click done when you have scanned all your pages
Add a name to the document
Save your document to the database
